A Scientific Encounter: The Complex reimagines historical scientific objects as catalysts for new ways of seeing and thinking and uses artistic imagination to uncover latent meanings and challenge linear/teleological narratives of scientific progress. Acts also as a “rearview mirror” on the evolution of knowledge, reflecting shifts in material culture embracing a philosophical turn redefining object-subject relationships, revitalising the role of material culture in natural sciences.

By engaging with these collections through an object-oriented lens, artists liberate their latent potential, recontextualising them for contemporary discourse.

When

February 1, 2026 – December 31, 2025
